Home Energy Scoring Tool

Evan Mills, Ph.D. • Lawrence Berkeley National Laboratory

Lawrence Berkeley National Lab

- National Lab of the U.S. Dep't of Energy
- Founded 1931
- Managed by and located next to U.C. Berkeley
- ~500 people working on energy efficiency

“The Home Energy Saver is one of the government services that make paying taxes worthwhile.”

Nick Wilder

Homeowner

Wheat Ridge, Colorado

Home Energy Saver Mission

- *Empower users to apply state-of-the-art research & know-how to reduce home energy use and greenhouse-gas emissions*
- *Offer an experience tailored to the individual user*
- *Serve diverse user communities and building types*
- *Define and remain on cutting edge of web tool technology*
- *Ensure objectivity, accuracy, transparency*
- *Partner with the private sector for deployment*

The Home Energy Saver:

- Collects and stores home-description information.
- Computes a home's energy use, cost, and carbon footprint on-line in a matter of seconds based on state-of-the-art models and data for any location in the United States.
- Estimates the relative importance of specific end uses (heating, cooling, water heating, major appliances, small appliances, and lighting).
- Generates a list of payback-ranked energy-saving upgrade recommendations.
- Transparently documented – no “black boxes”
- Provides extensive decision-support information to help users implement the recommendations.

Key Milestones

- HES Consumer tool founded in 1994 by Evan Mills
- Home Professional tool (HESPro) launched in 2009
- Launched asset-rating tool (Home Energy Scoring Tool) in 2010
- Partnership with the National Association of Rural Electric Cooperatives (NRECA) / Touchstone adopted HES as the official calculator for their ~30 million customers
- Licensing engine to third-party software developers (starting in 2009 with Microsoft)
- R&D100 award in 2010
- Launched Social Network for home performance pros in 2010
- Expansion to multifamily and Weatherization Assistance Program applications: 2010-2013

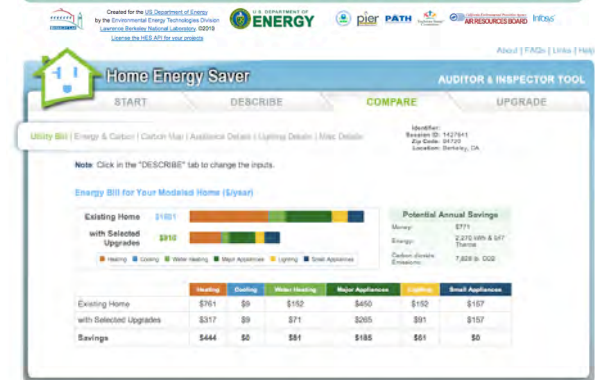

Value of HES

- **Free:** to all users
- **High impact:** 1/3 of surveyed users say they are implementing HES recommendations
- **Best tool out there:** especially for operational analysis and customizability to individual user conditions
- **Non-proprietary:** LBNL/DOE has no commercial interest - neutral, unbiased
- **Very cost-effective:** ~\$0.10 per user visit to just maintain the tool (excluding new features).
- **Huge audience:** 1 million visits per year to all the websites; 600 other websites link to it.
- **Systematically reaches diversity of users:** Consumer - Pro - Score each serve different and complimentary audiences and market-enabling purposes
- **Effective tech-transfer conduit for DOE/EERE:** official, vetted methods and data
- **Enables private sector tool developers to innovate:** they can license for a small fraction of cost it would involve to build their own (e.g. to Microsoft)
- **DOE has control:** over development priorities, content, whereas private sector tools are uncontrollable
- **Transparently documented:** assumptions, methods extensively documented on public wiki
- **The tools are "interoperable":** i.e., session information can be migrated from one to another --> internal consistency
- **Powering WAP audits:** New collaboration with ORNL will greatly improve their existing tools, and extend analysis to multifamily buildings.
- **Hosts leading social media sites:** Home Energy Pros is #1 home performance social network
- **Frequent source of media coverage for DOE:** see <http://hes.lbl.gov/consumer/media-coverage>
- **Longevity:** We will likely be around longer than any given private company (already 16 years).

Highlights

Sponsors: DOE <ARRA>, EPA, CEC, HUD, CARB, Touchstone

1. First and most advanced home energy/carbon web calculator
2. Leverages tens of millions of dollars in federally-funded energy efficiency R&D to make results usable by the public (researchers use it as well)
3. Comprehensive analysis; Whole-house scope (incl. interactions)
4. DOE-2 for HVAC; RECS data for benchmarking; water heating methodology from appliance standards analysis; actual tariffs; data for other sectors developed at LBNL and elsewhere
5. Technological and behavioral variables can be set by user
6. Broad decision-support offerings (e.g. DOE tip sheets, Energy Star appliances lists, *Home Energy* magazine articles, Social Media)
7. Growing demand from private sector for web services that can be used to build derivative websites. Licensed to Microsoft.
8. 6 million visits (>100 million hits); ~1 million/year [211 countries/territories]
9. Users from every state; 91% are homeowners or renters
10. 35% of surveyed users say implement some recommendations

Cumulative Visits to Home Energy Saver: March 1998 to September 2009

Millions

Daily Visits To Home Energy Saver Web Site: July 2002 - April 2009

Ultra-low Investment per Visit

Cumulative HES Investment
(~\$0.50 per visit)

O&M
(~\$0.10 per visit)

Highly cost-effective: O&M cost is $< 0.3\text{¢/kWh}$ -% savings...
... compared with $\sim 10\text{ ¢/kWh}$ electricity purchase price

Resulting Actions to Save Energy

.. (N=8,284 responses as of 8/25/2008)

	Home owners	Renters
Took action to save energy based on experience at the site	33%	27%
of which: behavioral	29%	43%
of which: equipment	26%	56%
of which: <u>both</u>	46%	52%
Other actions (e.g. professional energy audit, called contractor, did more research)	14 %-points	8 %-points

User Feedback

Ongoing e-survey with 8300 responses thus far

- Users in *every* state (8% CA, 6% TX, 5% NY, 5% FL)
- Return Visits: 18% of users (~50% of non-households)
- Navigation: 87% say “OK” to “very easy”
- Required Input: 83% “Just Right” or “Too Simple”
- Content vs Calculations: Equally important!
- Will Return: 72% “yes”; 21% “undecided”
- Will Recommend: 73% “yes”; 18% “undecided”
- Implemented Efficiency Improvement based on site:
 - 33% (owners); 27% (renters)
 - 70% and 58% of the upgrades were for equipment as opposed to behavior changes

Swisher Electric Cooperative, Inc.
A Touchstone Energy® Cooperative
The power of human connections®

Home Energy Saver

Energy prices are increasing and Swisher Electric is working hard to maintain costs and provide reliable, low cost power to its members. In order to lessen the impact on rising fuel costs, Swisher Electric and Touchstone Energy are introducing the Home Energy Saver.

The Home Energy Saver's Energy Advisor calculates energy use and savings opportunities, based on a detailed description of the home provided by Swisher Electric members. Cooperative Members can begin the process by simply entering their zip code, and in turn receive instant initial estimates. By providing more information about the home the user will receive increasingly customized results along with energy-saving upgrade recommendations.

The Energy Advisor:

- calculates heating and cooling consumption
- calculates domestic water heating energy consumption
- connect users to "how-to" information resources throughout the Internet
- features extensive passages from the book *No-Regrets Remodeling*

Where are your ducts located? Conditioned Space

Are the ducts insulated? ☐ Yes ☒ No/Don't Know

Are the ducts sealed? ☐ Yes ☒ No/Don't Know

If only sealed with duct tape, answer "no".

CALCULATE

Based on default values for the zip code you entered, here is a comparison of the energy costs (in \$/yr) for an average home and an energy-efficient home in your area.

YEARLY ENERGY COST FOR TYPICAL HOMES IN BERKELEY, CALIFORNIA (\$/YEAR)

Average home: **\$1,205**

Efficient home: **\$811**

Heat Cooling Hot water Large appliances Small appliances Lighting

Important Note: These are initial estimates only, and your results may vary. If you have not already done so, we strongly encourage you to retain a professional energy auditor to develop a detailed work scope and budget for improving your home. We also recommend the [Home Performance with ENERGY STAR](#) program when considering home improvement.

To customize this analysis for a specific house, go the the [DESCRIBE](#) tab and enter the relevant information.

1 Supply ducts leak air outside living space.
 2 Return ducts leak air from house due to leaky return duct.
 3 Return is disconnected.
 4 Air leaks in through holes in basement walls.

1 Return duct leaks air from basement instead of house.
 2 Supply ducts leak air into the house due to leaky return duct.
 3 Return is disconnected.
 4 Air leaks in through holes in basement walls.

Minimizing Energy Losses in Ducts
 In new home construction or in retrofits, proper duct system design is essential. For information about sealing and insulating your ducts, see the [Duct Sealing and Insulation](#) page.

Designing and Installing New Duct Systems
 Efficient and well-designed duct systems distribute air properly throughout your home without leaking or in retrofits, proper duct system design is essential. The system should provide balanced supply and return flow to maintain a neutral pressure within the house.

Since even well-sealed and insulated ducts will leak and lose some heat, many new energy-efficient homes place the duct system within the conditioned space of the home. The simplest way to accomplish this is to hide the ducts in dropped ceilings and in corners of rooms. Ducts can also be located in a sealed and insulated chase extending into the attic or built into raised floors. In both of these latter cases, care must be taken during construction to prevent contractors from using the duct chases for wiring or other utilities.

In either case, actual ducts must be used: chases and floor cavities should not be used as ducts. Regardless of where they are installed, ducts should be well-sealed. Although ducts can be configured in a number of ways, the "trunk and branch" and "radial" supply duct configurations are most suitable for ducts located in conditioned spaces.

Ducts Inside Conditioned Space
 Sealing and insulating as efficient as possible
 Dropped ceiling
 Recessed lighting

What Are Your Reasons for Saving Energy?

[Checklist: Water and Gas at Home](#)
[Ext. for Your Home](#)
[New Savings Ideas: What to Do](#)
[Checklist: Water and Gas at Home](#)

Have your ducts professionally sealed to reduce leakage

Economic Benefits
 Estimated Annual Bill Savings: \$323
 Estimated Lifetime Energy Cost Savings: \$4845
 Upgrade Cost: \$300
 Return on Investment: 108%
 Upgrade pays for itself in: 1 year

Additional Benefits: Sealing leaky ducts can help improve comfort and avoid indoor air pollution problems, fire hazards, and rooftop ice-dam formation during the winter.

Upgrade Description: Have your ducts professionally sealed so that the duct leakage is no more than 10% total (supply and return) as a percent of fan flow. The average forced-air duct system loses about 30% of the energy produced by the furnace or air conditioner in the course of distributing air to the rooms. This energy loss can be reduced by sealing duct joints with mastic or high-quality duct tape, and insulating ducts in unconditioned spaces.

Note: The annual bill savings and cost-effectiveness assume that your ducts are sealed to 10% total leakage.

Purchasing Tips:

- To get the level of air sealing specified above, you probably will have to have your ducts sealed by a qualified professional.
- Use high quality duct sealing materials: Underwriters Laboratories-tested UL 181 mastics and tapes listed for duct sealing, or AEROSEAL® sealant.
- Make sure you have your ducts professionally tested with a fan flow metering device after sealing. Ask your contractor for a report documenting the final leakage level; the report may help increase the resale value of the house. Also have the ducts tested prior to sealing, so that you can see how much improvement has been made. See the ENERGY STAR® Specifications for Ducts web site for further information about testing.

UPGRADE RECOMMENDATIONS SUMMARY

Visit '[Recommendations](#)' to see more information on each upgrade.

	Yearly Savings	Estimated Added Cost	How Much is Too Much?	Simple Payback Time	Estimated ROI	Avoided Emissions (lbs. CO₂)
Total for recommended upgrades	\$2261	\$8192	\$22610	4	27%	22916

Important Note: These are initial estimates only, and results may vary. If the owner has not already done so, we strongly recommend that they retain a professional energy auditor to develop a detailed work scope and budget for improving the home. We also recommend the Home Performance with ENERGY STAR program when considering home improvements.

Upgrades Requiring Investment

1. Basement wall insulation
2. Electric clothes dryer
3. Thermostat
4. Duct Sealing
5. Indoor lights
6. Wall insulation
7. Gas furnace

Other benefits that often come along with these energy-saving upgrades

- Well-insulated basement walls can make your home more comfortable and quieter, and guard against moisture problems and water pipe breakage.
- Natural gas clothes dryers reduce your home's peak load on the power grid compared to an electric dryer.
- Programmable thermostats can help keep your home more comfortable.
- Having a professional seal your home's air leaks can make your home more comfortable, reduce the risk of moisture damage, improve indoor air quality and fire safety, and help to prevent frozen water pipes.

UPGRADE > details

Have your ducts professionally sealed to reduce leakage

Economic Benefits:

Estimate Yearly Bill Savings:	\$403
Estimated Lifetime Energy Savings:	\$8,060
Estimated Added Cost:	\$890
Maximum Price for 10 Year Payback:	\$4,030
Return on Investment:	45%
Upgrade Pays for Itself in:	2 year

Additional Benefits:

Having a professional seal your home's air leaks can make your home more comfortable, reduce the risk of moisture damage, improve indoor air quality and fire safety, and help to prevent frozen water pipes.

Upgrade Description:

Have a qualified professional seal your home's air leaks. Leaky houses waste energy because heated or cooled air can easily escape. Older homes tend to be leakier than newer homes. Tightening up a leaky house will reduce the heating and cooling bills. Recent advancements in air sealing technology allow specialists to go beyond the old techniques of caulking and weatherstripping around obvious places such as doors and windows. The biggest problems are usually hidden leaks in out of the way places such as attics, floors and walls, which are easily found and sealed by a specialist. Note: The annual bill savings and cost-effectiveness assume that your home's air leakage is reduced by 25%.

Purchasing Tips:

- To get the best results, hire a qualified contractor, preferably a "building performance contractor", or "energy auditor" to find out where the leaks are in your home's shell. Make sure the contractor uses a "blower door" test to find the air leaks. An infrared scan can be beneficial in addition to the blower door test. Check with your utility company; some offer no- or low-cost basic energy audits. However, the extra money you would spend to have the audit done by a home performance contractor is often well worth it. ^{5,6}
- Make sure your contractor tests the leakage rate after completing the sealing, not only to determine the degree of improvement, but also to ensure that the ventilation in your home is adequate. If you don't already have proper mechanical ventilation, consider installing a ventilation system. Proper home ventilation will make your home healthier and more comfortable.
- Make sure your contractor performs a combustion safety test after sealing your home's air leaks. This test checks for backdrafting and carbon monoxide, and will help assure your home is safe. ⁹
- If you choose to do the work yourself, follow the guidance in ENERGY STAR's [Do-It-Yourself Guide to ENERGY STAR Homesealing](#).

TOOLS OF THE TRADE

A hammer and a saw used to be the key tools for home contractors. Today, the best-in-breed also use high-tech equipment while performing a [professional energy audit](#) or verifying that construction has been done correctly. [Infrared cameras](#) can "see" heat loss and find hidden energy savings opportunities. [PFT tests](#) or [blower door tests](#) measure a home's air leakage and tell you when sealing has been successful. Combustion monitoring equipment and indoor-air pollution detectors ensure that a heating system is not only efficient but also not dumping dangerous pollutants into the home. All of these practices should be conducted with a mind towards "[whole-house system performance](#)." [Professional energy audits](#) will bring many of these tools into play to help provide a very close look at how the house is built and operated.

Kermit Was Right Evan Mills, Mendocino, CA, 95460

The man

Got a rebate for my old fridge

High-efficiency dishwasher

In go the low-e, argon skylights

What I did

- ☒ No-cost changes
- ☒ Efficient lighting
- ☒ Appliance upgrades
- ☒ Heating or cooling equipment upgrades
- ☒ Air sealing
- ☒ Improved ducts
- ☐ Improved insulation

My story

It's not easy being Green. Even if you have a Ph.D. on the subject. Kermit was right, but I'm on a mission to prove him wrong.

Moving to a new home in mid-2008 presented a great opportunity to walk the talk. The late-1970s house was an eco-basket-case. To put it more positively, it offered a lot of that proverbial low-hanging fruit: ancient heating system, incandescent lighting, inefficient appliances, you get the idea. This will be like shooting fish in a barrel, I assured myself.

What better way to start than to jump on Google and see what the best products are these days? Easier said than done. I quickly learned that one of the biggest obstacles to doing the right thing these days is having too much of the

Asset Rating Tool

Home Energy Scoring Tool

[Contact Us](#) | [About Us](#) | [Login](#)

The Department of Energy's Home Energy Scoring Tool allows qualified assessors to:

- Generate clear, credible home energy assessments at a reasonable cost;
- Recommend customized upgrades and other cost saving tips; and,
- Help consumers compare the energy use of different homes.

The Home Energy Scoring Tool is quick and easy to use. Qualified assessors can gather the information needed to assess a home in one short site visit. This low-cost, high value assessment can be provided as a stand-alone service or as an add-on to a home inspection or comprehensive energy audit.

For more information on how to become a qualified assessor or receive a home energy score, visit www.homeenergyscore.gov.

Video: What is Home Energy Score?

Watch this 3 minute video to learn about the DOE's new Home Energy Score Program. Home Energy Score offers householders and home buyers an easy and economical way to get a credible, home energy audit, with customized advice on how to save energy in your home and money on your utility bills.

Lawrence Berkeley
National Laboratory

U.S. DEPARTMENT OF
ENERGY

The Home Energy Scoring Tool was developed by Lawrence Berkeley National Laboratory in collaboration with the U.S. Department of Energy. The modeling engine can be licensed as a web service API.

Future Directions

- Deploying at scale through web services so that third-party developers (public/private) can create user interfaces “powered” by HES
- Building engagement through Social Media communities
- Differentiating HESConsumer and HESPro offerings
- Validating against actual home data
- Mounting new technologies, modeling techniques, and interfaces

Features in the pipeline

- Improved/updated defaults
- Expanded list of retrofit measures
- New technologies and end-uses
- Multifamily modeling
- Utility bill calibration
- Behavioral variables
